# When to start planting your garden

Northern Utah

**LIVE WELL UTAH**

With the weather warming up, it's time to start planning for the upcoming growing season. While each location has its own unique weather conditions, here are some tips for planting along the Wasatch Front.

The average date of the last spring frost will vary with location and elevation. Listed below are the 30-year average last frost dates for various cities.

### City Average Last Frost\*

Bountiful – Val Verda, April 17  
Farmington, May 5  
Midvale, May 13  
Ogden, May 3  
Provo – Airport, May 21  
Provo – BYU, May 1  
Salt Lake City – Airport, April 26  
Salt Lake City – U of U, May 1  
Salt Lake County – Cottonwood Weir, April 30  
Tooele, May 7  
Tremonton, May 3

Hardy plants like rhubarb, broccoli, cabbage and peas can be planted as soon as the soil dries out in the spring.

### **Group A: Hardy**

Average Planting Date: March 15 – May 1

Artichoke

Kohlrabi

Asparagus

Onion

Rhubarb

Broccoli

Peas

Spinach

Cabbage

Radish

Turnip

### **Group B: Semi-Hardy**

Plant a week or two after “A” group or about two weeks before average last spring frost.

Average Planting Date: March 20 – May 1

Beet

Lettuce

Potato

Carrot

Parsley

Salsify

Cauliflower

Parsnip

Swiss chard

Endive

Tender plants like summer squash, cucumbers and sweet corn can be planted around the average date of the last spring frost, about when first apples reach full bloom.

### **Group C: Tender**

Average Planting Date: May 5 – June 1

Celery  
Spinach  
Cucumber  
Summer squash  
Dry beans  
Sweet corn  
Snap beans

### **Group D: Very Tender**

Plant when the soil is warm, about two weeks after “C” group.  
Average Planting Date: May 20 – June 10

Cantaloupe  
Pumpkin

Eggplant  
Tomato  
Lima beans  
Watermelon  
Pepper  
Winter squash
